student workbooks are designed to support your teaching and help your students skills development each topic covers 5 6 key topics in as or a2 chemistry and concludes with synoptic questions drawing together different elements of the subject area each topic is relevant to the main specifications and comprises 2 pages of background material eg short descriptions and diagrams etc giving an overview of the topic and 4 5 pages of related exercises designed to develop and test student skills using the background material and additional resources with space provided for written answers the workbooks are designed for systematic classroom use to support your own scheme of work so you can either be guided by the structure of the workbook or use it as it corresponds to your own teaching programme however it is expected that students will tackle the topics in order as they will need to carry knowledge forward into each new topic area the questions in the exercises take various forms they have been written to help students develop skills that will serve them well in their exams rather than to reflect the exam structure or test knowledge recall answers to the exercises are provided in an accompanying set of teachers notes the notes serve as a guidance to teachers on what to expect from student responses so where there is no objectively right answer the notes identify the key points that should appear in the answer student workbooks are available only in class sets of 10 priced at 35 per set plus postage and packing each set of workbooks includes one free copy of the teachers notes

the complexity of food chemistry makes it a challenging subject for students studying in a food science course although there are excellent food chemistry books available in the market they have two major flaws they are either encyclopedic or they are not pitched correctly to undergraduate food science students the first problem creates difficulties for students to identify what is important and how much they need to know the second problem arises when the book is written by authors that are not food scientists e g chemists they are not academics that are engaged with teaching or they are not sufficiently qualified to teach in this case it is difficult to find links between the chemistry of foods and its relevance to applications or quite frequently future

employment prospects of the student introduction to food chemistry bridges this gap in the relevant literature as it employs the latest pedagogical theories in textbook writing to present the subject to students with broad range of cognitive skills this book presents specific learning objectives for each chapter and is self contained so students will not need to search for essential information outside the textbook to support learning the book has didactic elements with information being conveyed with 3d figures color coded schemes and graphs annotations on figures that link it to the text descriptions built in pedagogy and learning activities at the end of each chapter that are linked to the learning objectives keywords and concepts for online search to instigate curiosity for further studies conversational writing style without losing academic rigor to support lecturers the book has helps focus teaching preparation on key aspects of food chemistry relevant to both industry and modern research aids the preparation of exams assignments and other types of assessment or learning activities for lecturers in search of a singular source to aid in their introductory food chemistry courses look no further than introduction to food chemistry
